13<sup>th</sup> March 2026

Dear All,

The introduction of the AOAC RI-certified method for multi mycotoxin analysis using 11+ MYCO MS PREP at Premier Analytical Services has made a significant difference to how we operate in the laboratory. The introduction of these columns has reduced our analytical run time from around 200 minutes to approximately 15 minutes. Its multi analyte design allows us to analyse complex samples for the key regulated mycotoxins in a single run, which has greatly simplified our workflow and improved both efficiency and analytical capability.

As a result, our laboratory can now test a wide range of mycotoxins quickly and confidently by LC MS MS, delivering consistent recoveries and improved sensitivity across a variety of matrices. The reduced run time has also enabled us to offer quicker turnaround times, which has been very well received by our customers.

The technical advice and support provided by R Biopharm Rhone were instrumental in helping our laboratory successfully implement the multi mycotoxin method using 11+ MYCO MS PREP, for which our company has received UKAS accreditation.

Your support in this regard has been exceptional.

Best wishes,

Ijaz Shah  
Head of Mycotoxins  
Bioanalytical Chemistry
